## JOB VACANCIES AND OVERTIME, AUSTRALIA, MAY 1995

### SUMMARY OF FINDINGS

#### TREND ESTIMATES OF JOB VACANCIES AND OVERTIME

	'000	Reference date			Per cent change	
		19 May 1995	17 Feb. 1995	20 May 1994	Quarterly	Annual
Job Vacancies		58.0	60.7	54.8	-4.5	5.8
Overtime per employee	hours	1.20	1.24	1.30	-3.1	-7.9
Overtime per employee working overtime	hours	7.21	7.26	7.33	-0.7	-1.6
Proportion of employees working overtime	%	16.60	17.04	17.76	-2.6	-6.6

#### Job vacancies

The trend estimate of *job vacancies* in May 1995 was 58,000. This is a fall of 4.5 per cent from February 1995, and is 8.4 per cent lower than the most recent peak of 63,300 vacancies in November 1994. The trend series is now 18.6 per cent lower than the previous peak of 71,200 vacancies in February 1989, the highest recorded vacancy level since the inception of the series in February 1984.

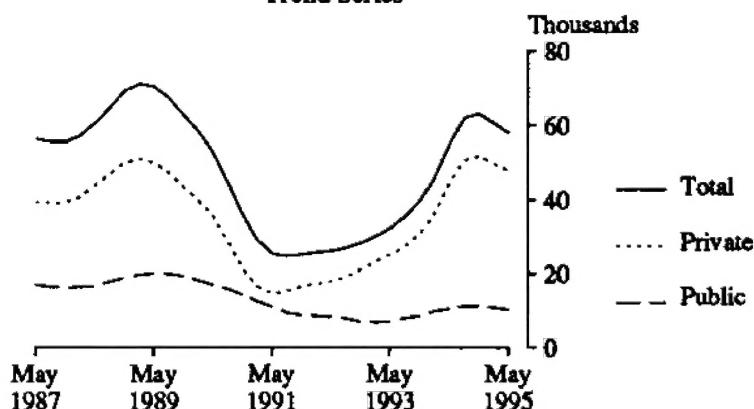

The trend estimate of job vacancies for the *private sector* was 47,700 in May 1995, a fall of 4.3 per cent from February 1995, but a rise of 7.8 per cent since May 1994. The trend estimate is now 8.2 per cent lower than the peak of 52,000 vacancies in November 1994, the highest recorded vacancy level for the private sector since the inception of the series in February 1984. The previous peak of 51,300 job vacancies occurred in February 1989 (refer diagram 1 below).

For the *public sector*, the trend estimate for May 1995 was 10,300, a fall of 5.6 per cent from February 1995. The trend series is 49.3 per cent lower than the peak of 20,300 vacancies recorded in May 1989.

Diagram 1 shows the trend estimates of job vacancies for the private and public sectors and the Australian total. Since February 1991, the growth in job vacancies has been concentrated in the private sector. In May 1995 the private sector recorded its highest relative contribution of 82.3 per cent to the Australian trend estimates since the inception of the series in February 1984, whereas its lowest recorded contribution level was 56.6 per cent for February 1991.

In original terms the *job vacancy rate* for Australia of 0.85 per cent was down 8.0 per cent from February 1995 but rose 0.9 per cent compared with May 1994.

Trend Series

### Overtime

All trend estimates of average overtime measures have fallen for the third consecutive quarter and are also down on the estimates for May 1994.

The trend estimate in May 1995 of *average weekly overtime hours per employee* was 1.20 hours, down 3.1 per

cent from February 1995 and 7.9 per cent since May 1994.

The trend estimate of *average weekly overtime hours per employee working overtime* was 7.21 hours, a fall of 0.7 per cent since February 1995, and 1.6 per cent since May 1994.

The trend estimate of the *proportion of employed persons working overtime* was 16.6 per cent, down 2.6 per cent since February 1995, and 6.6 per cent since May 1994.

### Changes to the survey

A new sample design was introduced for the August 1994 survey, which resulted in a higher than normal proportion of newly selected units in the sample for August 1994. Hence caution should be used when comparing estimates for August 1994 with those for previous and subsequent quarters. From August 1994, the industry classification used in this publication is the Australian and New Zealand Standard Industrial Classification (ANZSIC), which replaces the Australian Standard Industrial Classification (ASIC). For further information see paragraphs 14 to 18 of the Explanatory Notes.

---

Note: Trend estimates are subject to revision when data for later quarters become available, and when seasonal adjustment factors are revised. See Explanatory Notes, paragraphs 10 to 13.

(a) Industry information is classified according to ANZSIC. For more information see paragraphs 14 to 18 of the Explanatory Notes. (b) Relates only to latest level estimate. See paragraphs 19 to 24 of the Explanatory Notes. (c) Excludes permanent defence forces.

## EXPLANATORY NOTES

### **Introduction**

This survey contains estimates of job vacancies and overtime for May 1995 based on information obtained from a sample survey of employers.

### **Scope of the survey**

2. All wage and salary earners who received pay for the reference period are represented in the survey, except:

- members of the Australian permanent defence forces;
- employees of enterprises primarily engaged in agriculture, forestry and fishing;
- employees in private households employing staff;
- employees of overseas embassies, consulates, etc.;
- employees based outside Australia;
- employees on workers' compensation who are not paid through the payroll.

3. Also excluded are the following persons who are not regarded as employees for the purposes of this survey:

- directors who are not paid a salary;
- proprietors/partners of unincorporated businesses;
- self-employed persons such as subcontractors, owner/drivers, consultants and persons paid solely by commission without a retainer.

4. All vacancies (as defined in the Glossary) for wage and salary earners are represented in the survey, except those:

- in the Australian permanent defence forces;
- in enterprises primarily engaged in agriculture, forestry and fishing;
- in private households employing staff;
- in overseas embassies, consulates, etc.;
- located outside Australia.

### **Survey design**

5. A sample of approximately 4,800 employers is selected from the ABS register of businesses to ensure adequate State and industry representation. The sample is updated each quarter to take account of new businesses, those which have ceased operation and structural changes such as takeovers and mergers. The statistical unit for the survey comprises all activities of an enterprise in a particular State or Territory. Each statistical unit is classified to an industry which reflects the predominant activity of the enterprise in the State or Territory. In a small number of cases where an enterprise has significant employment in more than one industry, a separate statistical unit is created for each industry. The statistical units are stratified by State, industry and size of employment and a simple random sample is selected from each stratum.

### **Historical series**

6. The series were introduced with the November 1983 survey. They replaced current job vacancy and overtime

series based on previous information from a sample of employers registered to pay payroll tax and from government organisations. Estimates contained in this publication are not strictly comparable with those obtained prior to November 1983.

### **Seasonal adjustment**

7. Seasonal adjustment is a means of removing the estimated effect of normal seasonal variation from the series so that the effects of other influences can be more clearly recognised. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular period. Volatile or unsystematic influences may still affect the interpretation of movement in the series, even after adjustment for seasonal variation. This means that quarter-to-quarter movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.

8. The series have been seasonally adjusted from February 1984 and the historical series can be made available on request. The seasonal factors are reviewed annually to take account of each additional year's original data. The most recent review took place in February 1995. The next review will be implemented with the November 1995 survey.

9. Details about the method of seasonal adjustment of these series are available on request.

### **Trend estimates**

10. The ABS considers that trend estimates provide a more reliable guide to the underlying direction of the data, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

11. The trend estimates in this publication, obtained by dampening out the irregular component from the seasonally adjusted series, are calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters. Revisions of trend estimates will also occur with revisions to the original data and re-estimation of seasonal adjustment factors. The seasonal factors are revised annually. The most recent review took place in the February quarter 1995. See paragraph 8 above.

12. If a series is highly volatile then the trend estimates will be subject to greater revision for the latest few quarters as data become available. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In such cases the effect of the irregular component on overall movements will remain in the seasonally adjusted and the original estimates but not in the trend series.

13. For further information, see *A Guide to Interpreting Time Series - Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Two feature articles which have appeared in the ABS monthly publication *Australian Economic Indicators* (1350.0) may also be of interest:

- *Picking Turning Points in the Economy* (April 1991); and
- *Smarter Data Use* (March 1992).

#### New industry classification

14. From the August 1994 issue of this publication, industry information shown in Tables 2 and 5 is classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC) - for more details refer to *Australian and New Zealand Standard Industrial Classification, 1993*, (1292.0). It replaces the Australian Standard Industrial Classification (ASIC), which has been in use for many years.

#### Historical ANZSIC estimates

15. Previously published ASIC industry estimates have been recompiled on an equivalent ANZSIC basis from May 1994 back to May 1993. The historical ANZSIC estimates were produced by recoding survey unit data from ASIC to ANZSIC. If there is sufficient demand, ANZSIC industry estimates will be produced for earlier quarters back to November 1983. In general, a charge is applied for providing unpublished information.

#### Survey design changes due to ANZSIC

16. With the introduction of ANZSIC for the August 1994 survey, a new sample design was introduced, which resulted in a higher than normal proportion of newly selected units in the sample. Approximately 50 per cent of the survey units in August 1994 were new to the sample compared with the usual proportion of 5 to 8 per cent.

17. The high proportion of newly selected units resulted in higher than normal standard errors on estimated May 1994 to August 1994 movements. Hence caution should be used when comparing movements of job vacancies and overtime between these two quarters and movements between previous and subsequent quarters in the series.

18. For further information see paragraphs 14 to 19 in the Explanatory Notes in the August 1994 issue of this publication.

#### Reliability of estimates

19. As the estimates in this publication are based on information relating to a sample of employers rather than a full enumeration, they are subject to sampling variability. That is, they may differ from the figures that would have been produced if the information had been obtained from all employers. This difference, called sampling error, should not be confused with inaccuracy that may occur because of imperfections in reporting by respondents or in processing by the ABS. Such inaccuracy is referred to as non-sampling error and may occur in any enumeration, whether it be a full count or sample. Efforts have been

made to reduce non-sampling error by careful design of questionnaires, detailed checking of returns and quality control of processing.

20. The sampling error associated with any estimate can be estimated from the sample results. One measure of sampling error is given by the standard error which indicates the degree to which an estimate may vary from the value that would have been obtained from a full enumeration (the 'true' figure). There are about two chances in three that a sample estimate differs from the true value by less than one standard error, and about nineteen chances in twenty that the difference will be less than two standard errors. No separate standard errors are calculated for seasonally adjusted and trend estimates.

21. An example of the use of a standard error on levels is as follows. If the estimated number of job vacancies was 25,000 with a standard error of 2,500, then there would be about two chances in three that a full enumeration would have given a figure in the range 22,500 to 27,500 and about nineteen chances in twenty that it would be in the range 20,000 to 30,000.

22. An example of the use of a standard error for a quarterly change estimate is as follows. If the estimated standard error for a quarterly change estimate of job vacancies was 1,000 and the quarterly change estimate between two quarters was 4,500, then there would be about two chances in three that a full enumeration would have given a quarterly change estimate in the range +3,500 to +5,500 and about nineteen chances in twenty that it would be in the range +2,500 to +6,500.

23. Quarterly movements in estimates of job vacancies and overtime are considered to be statistically significant where they exceed two standard errors.

24. Another measure of the sampling error is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate. Level estimates with a relative standard error of 25 per cent or more, denoted with an asterisk in this publication, are subject to sampling variability generally considered to be too high for most practical purposes.

#### Related publications

25. Users may also wish to refer to the following publications which are available on request:

*Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime* (6256.0)

*The Labour Force, Australia* (6203.0) — issued monthly

*Average Weekly Earnings, States and Australia* (6302.0) — issued quarterly

*Average Weekly Earnings, Australia 1941 - 1990* (6350.0) — issued February 1992

*Employed Wage and Salary Earners, Australia* (6248.0) — issued quarterly.

26. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0) The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

#### Unpublished statistics

27. Unpublished job vacancies and overtime estimates can be made available on request for various combinations of the following variables: State/Territory, sector (public or private) and industry (broad grouping as per Table 5). It should be noted, however, that estimated lower levels of disaggregation than that published in this bulletin may be subject to sampling variability considered too high for most practical purposes. Inquiries regarding data availability and associated charges should be made to the officer whose name appears in the Inquiries box at the front of this publication.

#### Symbols and other usages

— nil or rounded to zero

\* subject to sampling variability too high for most practical purposes (see paragraph 24 above)

28. Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes in the Summary of Findings and publication tables are based on unrounded numbers and consequently could differ from percentage changes that are calculated from the published rounded statistics.

#### Forthcoming issue

29. The August 1995 issue of *Job Vacancies and Overtime, Australia*, (6354.0) is expected to be released on 28 September 1995.

## APPENDIX A: GLOSSARY

*Average hours of overtime per employee* is calculated by dividing total overtime hours paid for in a particular group by the total number of employees in the same group (including those who were not paid for any overtime).

*Average hours of overtime per employee working overtime* is calculated by dividing total overtime hours paid for in a particular group (e.g. industry, State or Territory) by the number of employees who were paid for overtime in the same group.

*Employees* refers to all wage and salary earners (as defined in paragraphs 2 and 3 of the Explanatory Notes) who received pay for any part of the reference period.

A *job vacancy* is a job available for immediate filling on the survey reference date and for which recruitment action had been taken. Recruitment action includes efforts to fill vacancies by advertising, by factory notices, by notifying public or private employment agencies or trade unions and by contacting, interviewing or selecting applicants already registered with the enterprise or organisation. Excluded are jobs available only to persons already employed by the enterprise or organisation. This point is particularly relevant to the Australian Public Service and the Public Services of each of the States and the Territories.

Excluded are vacancies:

- of less than one day's duration;
- to be filled by persons already hired, or by promotion or transfer of existing employees;
- to be filled by employees returning from paid or unpaid leave or after industrial dispute(s);
- not available for immediate filling on the survey reference date;

- not available within the particular State or Territory to which the return relates;
- for work to be carried out under contract;
- for which no effort is being made to fill the position.

The *job vacancy rate* is calculated by expressing the number of job vacancies as a percentage of the number of employees plus vacancies.

*Overtime* is time worked in excess of award, standard or agreed hours of work for which payment is received. Excluded is any overtime for which employees would not receive payment, e.g. unpaid overtime worked by managerial, executive, etc. staff, normal shiftwork and standard hours paid for at penalty rates.

*Overtime hours* represent the number of hours of overtime paid for. Respondents are instructed not to convert overtime hours to their ordinary time equivalent. For example, 100 hours of overtime paid for at time and a half and 20 hours at double time would be counted as 120 hours, not 190.

*Reference date* for the survey is the third Friday of the middle month of the quarter. The reference date for the current survey is 19 May 1995.

*Reference period* for the survey refers to the last pay period ending on or before the reference date.

*Sector*. Public sector includes all local government authorities and government departments, agencies and authorities created by, or reporting to the Commonwealth and State Parliaments. All remaining employees are classified as private sector.

## For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

### Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

### National Dial-a-Statistic Line

0055 86 400

(Steadycom PL: premium rate 25c/21.4 secs.)

This number gives 24-hour access, 365 days a year, for a range of statistics.

### Electronic Data Services

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about these electronic data services, contact any ABS Office (see below).

### Bookshops and Subscriptions

There is a large number of ABS publications available from ABS bookshops (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are supplied by mail on a regular basis (telephone Subscription Service toll free on 008 02 0608 Australia wide).
